

UV Gel Nail Extensions

A bit about the course:

UV gel nail extensions uses a no-odour system, requiring no additional products or chemicals (sometimes referred to as a 'pre-mixed system'), using an ultraviolet (UV) light is used to cure/set the extension which is applied using the tip and overlay method. This offers a more flexible nail extension alternative for those not suited to acrylics, wanting a natural looking tip still allowing the nail underneath to grow. UV gel extensions are in high-demand and this treatment proves to be an extremely profitable skill to learn. UV Gel Nail extensions can easily be finished with gel polish for an add-on service boosting earning potential and a high shine, long lasting result.

Course Duration

This course is structured over one day and runs from 10am – 4pm. We ask students to arrive at 9.45am to ensure a prompt start. You will learn the theory of the treatment firstly, and spend the majority of the day practising your practical skills, with a short break for lunch.

What is included?
